

DIRECTIONAL SEARCH CLIPS

IEP Fire is please to announce the development and release of *Directional Search Clips* the newest product release from IEP Fire designed for firefighter safety. The *Directional Search Clips* are a two piece design that attaches to any 1/4" rope without the aid of special equipment or tools.

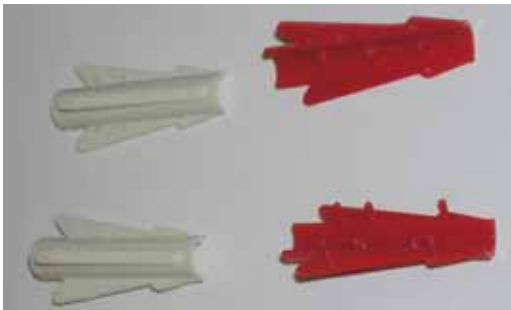

The arrow shape of the *Directional Search Clips* allows a gloved hand to easily identify the direction of egress by simply sliding the hand over the clip. A smooth slide over the clip indicates the arrow pointing towards the end of the rope, snagging the glove on the "quill" end indicates the direction of exit. *Directional Search Clips* are available in "GLOW IN THE DARK" & "FIRE ENGINE RED".

"GLOW IN THE DARK"

"FIRE ENGINE RED"

Two piece design is easily attached to your rope without the special equipment or tools.

Arrow shape of clip offers direction information through a smooth/snag sliding action. Simply slide hand over arrow, no more counting and feeling for multiple knots.

AVAILABLE ONLY THROUGH
